RUTGERS CODING BOOTCAMP **2016**
FACE THE MUSIC / FULL STACK DEVELOPER

- ❖ Designed and built a mood based play-list generator with Spotify API as a base.
- ❖ Application on FireBase enables the user to click a new picture or upload an existing picture and use that to capture the mood to search for play-list on Spotify.
- ❖ The application is setup with two layers of login (one at FireBase application level and another at Spotify/Facebook application level). I was solely responsible for creating modules for firebase login, embedding filepicker API which can be used for attaching the picture, setting up Firebase storage to store pictures and firebase database. Database design was primarily to store user information that was used for data validation.
- ❖ Worked with the team to integrate with the Spotify to retrieve the playlist and create the display list in the application.
- ❖ Technologies used - FireBase, HTML, CSS, Bootstrap, Ajax, REST API, JSON, JavaScript and JQuery
